Garage doors are the largest and heaviest moving object in most homes, and that door systems must be properly adjusted and maintained in order to function safely.

Annual inspection of your garage door is very important to prevent premature replacement of operating difficulties.

## PROGRAM HIGHLIGHTS

- A twelve point maintenance and safety inspection is performed on each garage door.
- A seven point maintenance and safety inspection is performed on each garage door operator system.
- Servicing of doors includes the tightening or replacement of defective bolts and nuts.
- Lubrication of rollers, pulleys, and cables, adjustment of springs.
- Servicing of operators includes adjustment of electric door openers, tightening of chain, setting limit switches and lubrication of the entire drive mechanism.
- A detailed PM inspection checklist is completed, noting any safety issues or needed repairs.
- The checklist is reviewed with the home owner and copy is supplied with service call receipt.
- Any necessary repair and/or replacement options are discussed with home owner prior to the technician's departure.

Regular inspection will ensure maintenance is done in a timely manner.
